AWS Access & Usage Guide

FarmwiseAI Product Challenge – Thiagarajar College of Engineering

Sign in, select your team's Builder role, and build using approved services in Mumbai.

01 Open the AWS Access Portal

https://ssoins-6595aa2cbf056abd.portal.ap-south-1.app.aws

Fallback: https://d-9f67598e80.awsapps.com/start

Use only your assigned Identity Center username shared by FarmwiseAI / the organizer. Do not use the AWS account email or root login.

02 Set up your first login

01 Open the AWS Access Portal URL.
02 Enter the username shared by the organizer.
03 Complete email verification / OTP for your first login.
04 Create your password.
05 Register multi-factor authentication (MFA) when prompted.
06 Sign in to the AWS Access Portal.
07 Open your assigned team AWS account when it appears.
08 Select your Builder role to create and work with AWS resources.

Returning users: Username → Password → MFA → AWS Access Portal

03 Choose your role

Role / permission set	When to use it
FAI-TCE-Builder-<Category>	Create and work with resources allowed for your challenge category.
FAI-TCE-Cost-Viewer	Review cost / usage information for your assigned account only.

Access is already assigned. You do not need to request a new permission set. You may see both roles; you should see only your assigned team AWS account.

Use only AWS Asia Pacific (Mumbai) | ap-south-1

Create student workloads only in Mumbai. Other Regions are restricted by FarmwiseAI controls. If the console opens elsewhere, switch to Mumbai before creating resources.

04 Name resources consistently

fai-tce-teamXX-<resource-name>

Replace XX with your assigned team number. Examples:

fai-tce-team05-api • fai-tce-team05-images • fai-tce-team05-results

The fai-tce-* prefix is enforced for S3 buckets, Lambda functions and DynamoDB tables. Use fai-tce-teamXX-* for all resources wherever the service supports a name.

Lambda execution role: Select the existing FAI-TCE-LambdaExecutionRole when asked. Do not create a new IAM role.

Approved services & responsible usage

Use the core services below plus only the additional services assigned to your category.

Core Services Available to All Teams

Service	Purpose
Amazon S3	Store files, images, datasets and application objects.
AWS Lambda	Run serverless backend code.
Amazon API Gateway	Create APIs for applications.
Amazon DynamoDB	Store application data in a serverless NoSQL database.
Amazon CloudWatch Logs	View application and Lambda logs.

Category-specific services

Challenge category	Available in addition to core services
AI / Agentic AI	Amazon Bedrock invocation for approved models only: • Ministral 3B Instruct • Ministral 8B Instruct • Amazon Titan Text Embeddings V2 • Amazon Titan Multimodal Embeddings Cross-Region inference profiles are restricted.
Mobile Vision	Amazon Rekognition: Detect Labels, Detect Text and Detect Faces only.
GeoAI / Land Documents	Amazon Textract: DetectDocumentText and AnalyzeDocument only.
Collector / District Intelligence	Core serverless services only.
Satellite / Crop Classification	Core serverless services only.
Street View / Urban Intelligence	Core serverless services only.

USD 100 event budget per team account

The budget supports monitoring and alerts; it is NOT a guaranteed hard spending cap. Stop unused resources and avoid unnecessary deployments. Report unusual usage or unexpected costs to FarmwiseAI support.

Please Do Not

- Use root login, create IAM users / roles, or modify AWS Organizations / account settings.
- Create workloads outside Mumbai, make S3 buckets public, or bypass security controls.
- Use unsupported / high-cost infrastructure such as EC2 or RDS unless FarmwiseAI explicitly enables it.

Some high-cost services are intentionally restricted for event safety and cost control.

If you receive AccessDenied

1. Check the Region: Asia Pacific (Mumbai) / ap-south-1.
2. Confirm you selected your Builder role.
3. Check the resource name: fai-tce-teamXX-* where applicable.
4. Check that the service is included in your challenge permissions.
5. If the required service is still blocked, contact the FarmwiseAI event support team.

Do not attempt to bypass an AccessDenied error using IAM or another AWS Region.

Quick start checklist

☐ Open AWS Access Portal ☐ Sign in and configure MFA
☐ Open your assigned team account ☐ Select your Builder role
☐ Switch to Mumbai / ap-south-1 ☐ Use fai-tce-teamXX-* resource names
☐ Use only approved services ☐ Monitor usage and clean up unused resources
